

### The project

E-QUALITY aims to collect all the quality methods and techniques that are used in partner Universities to ensure the quality of teaching and learning. The main objective is to integrate the evaluation process into a broader process of quality management and development by introducing transparent rules and procedures to discourage mere compliance with evaluation criteria and indicators but rather encourage adherence to the spirit of quality that forms the foundation of quality assurance.

The results to be produced for the purposes of the E-QUALITY project are the Quality Assurance Management System in Higher Education, the E-QUALITY Platform, and the Training Course and MOOC for QA Managers and Administrators. All the produced materials will serve as tools for the promotion of the establishment of a common framework for quality assurance standards in higher education institutions and will improve existing capacities while introducing new models of monitoring quality.

### Objectives:

- Foster the internal communication among QA managers and staff;
- Integrate the evaluation process into a broader process of quality management and development.
- Introduce transparent rules and procedures which are discussed and then clearly;
- Documented and communicated to the institutional community;
- Design evaluation tools and methodologies in such a way as to discourage mere compliance with evaluation criteria and indicators but rather encourage adherence to the spirit of quality that forms the foundation of the indicators;
- Involve academic and administrative staff, students and external stakeholders in internal procedures;
- To raise awareness for the need to foster a quality culture among the members of the institution;
- Contribute to the Bologna process by increasing the attractiveness of European Higher Education.
